### Dear Customer!

*The devices, assembly groups or connections described in this manual are made for the indicated use only. If you are not sure about the intended purpose of the product, please contact the dealer.*

*In order to operate the system telephone on the PBX systems COMpact 4410 USB, COMpact 2206 USB, COMpact 4406 DSL, COMmander Basic and COMmander Basic 19", these Auerswald PBX systems must have the **Software version 1.6A** or newer. If this is not the case, please perform a PBX firmware update (refer to the PBX manual).*

## Functional Description

The cordless system telephone *COMfort DECT* is designed for the connection to the Auerswald PBX systems *COMpact 4410 USB*, *COMpact 2206 USB*, *COMpact 4406 DSL*, *COMmander Basic* and *COMmander Basic 19"*. You do not only phone with digital ISDN speech quality but you are still reachable away from your office. The handset has a comfortable and easy-to-use handling, is surprisingly light-weight but still robust. It is fitting well for professional use.

The *COMfort DECT* consists of the basestation (*COMfort DECT Base 128*) and the handset (*COMfort DECT 800*). You can log in up to eight *COMfort DECT 800* handsets to one basestation. With the *COMfort DECT* repeaters (XA), (available as an option) you can bridge distances of up to 1000 m e.g. to supply distanced buildings with DECT system telephony. Please ask your authorized dealer.

## Scope of Functions

*The scope of functions described here is only completely usable with a professional installation and a correct configuration of the PBX and the connected PC. We highly recommend to consult your authorized dealer first.*

*Please ask your network operator about the availability of some ISDN service attributes. Some of these functions may be available for an extra fee.*

*The operation of the telephones on other PBX systems than recommended or on the public telephone network is not intended.*

- Illuminated 3-digit display with 12 characters per line, one symbol line
- Vibration ringer and optical call signalization via LED
- Up to 65 (actual number is subject to the firmware version) telephone book entries per handset – synchronization with the telephone numbers and names of the global short-code memory of the PBX
- Headset connection, automatic call acceptance is possible
- Redial of the last 10 telephone numbers is possible
- Caller list of the last 10 unsuccessful incoming calls
- key lock by key pressing or automatically
- Silent mode by key pressing (mutes all acoustic signals)
- Profiles for „indoor“ and „outdoor“
- Up to 12 hours of call time
- Up to 120 hours of stand-by time

## Tips for the Use of this Manual

This manual describes in all details the use of the system telephone *COMfort DECT 800*. In order to get certain information quickly and carefully directed, the manual will offer you different helps and guide lines:

- The content on [page 3](#) gives you an idea about content and organization of this manuals.
- The index on [page 50](#) helps you to find certain text portions for a certain term.
- In the texts you will be referred to other chapters or pictures with the help of cross references. They will illustrate the respective theme.
- On the right side the headlines of the paragraph will be repeated.

## **Symbols used in the Manual**

The warning triangle shows you important advice. You must absolutely take care of these in order to avoid damages on devices or even on persons.

The hand gives you additional advice. These refer you to circumstances which were often disregarded and therefore led to misunderstandings and longer search for an error.

This symbol marks tips and tricks that make telephoning with your system telephone easier and more comfortable.

## **Terms/Abbreviation used in the Manual**

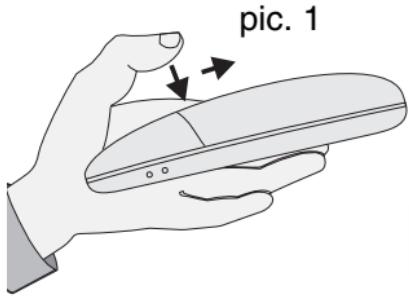

Cursor: Insert or writing symbol

LED: **L**ight **E**mitting **D**

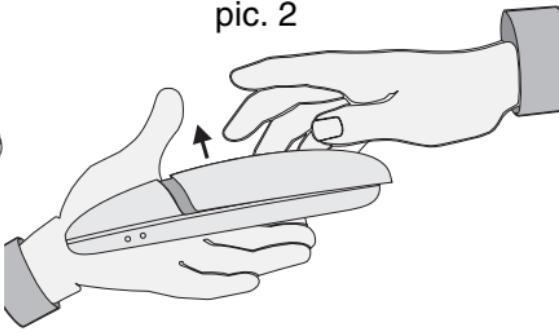

## Commissioning

### Connect the rechargeable Battery

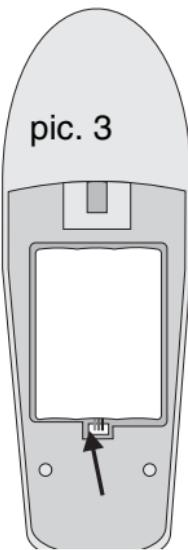

Put the handset with the display downwards on your palm. Open the protective cover app. 5 mm by sliding it with the thumb of the same hand (pic. 1). Then lift the cover and take it away from the device (pic. 2). Connect the battery plug to the jack in the rechargeable battery compartment. Make sure the red wire is near the position of the arrow (pic. 3).

pic. 1

pic. 2

pic. 3

*Do not use any other rechargeable batteries type than the enclosed ones and no normal batteries. Other rechargeable batteries may cause a short circuit and destroy the battery container!*

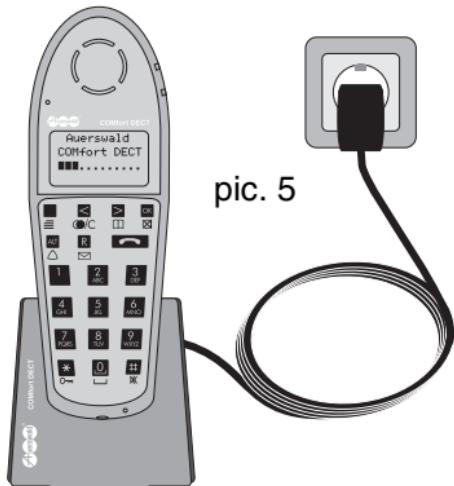

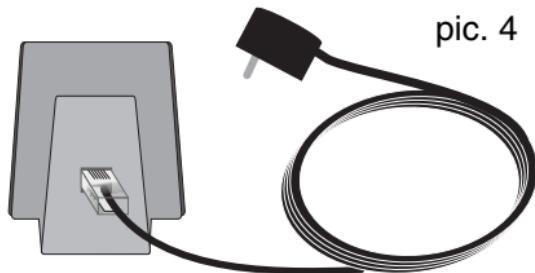

*Please pay attention to the correct waste disposal of the no longer useful rechargeable batteries. Do not put the rechargeable batteries into the domestic waste, but to a recy-*

cling station for old batteries. This is also valid for the whole unit if it is not useful any longer one day. (see also [chapter Environmental Advice on page 13](#)).

## Charge the Battery

Connect the charger with the wall power supply ([pic. 4](#)) and then with a freely accessible 230 V mains jack with protective earth. Put the telephone into the desktop charger ([pic. 5](#)).

The first charging will need app. 3,5 hours. The charge status will be shown in the display. After the first charging procedure you can put the telephone into the desktop charger after every call.

To extend the battery lifetime, you should discharge the rechargeable battery completely from time to time. Keep the telephone switched on until it switches off by itself.

## Subscribe to a Basestation

Before you can make a call, the handset has to be subscribed to a basestation and configured with the configuration program of the PBX. This is described in detail in the manual of the basestation.

*If the telephone is subscribed and in range you will see on the left side of the display the sign: (»).*

## Connect a Headset

To connect a Headset (e.g. the GN Netcom M2520) to the handset, plug the plug of the headset into the jack at the bottom (**pic. 6**).

*To accept a call when you can't use your hands at the moment, you can activate the automatic call acceptance (see [page 44](#)).*

## Placing and Cleaning of the Device

Put the charger on a non slippery pad. It might be possible that some plastics or colors used on furniture are aggressive to the device feet. This chemical reaction might cause damage to the surface of your furniture. The manufacturer is not taking any responsibility for this kind of damage.

Protect your system telephone against dirt, dust and moisture. If a cleaning is necessary, wipe the casing with a lightly damp cloth or use an antistatic cloth. Make sure, no moisture will enter the casing.

## **Safety Precautions**

- Read the manual and keep it for reference. Additional questions can be answered by your dealer. There are no user serviceable parts inside. Do not open the case!
- Do not use other rechargeable batteries than the enclosed ones and no standard batteries. These rechargeable batteries/batteries may burst and/or destroy your unit!
- Do not short-circuit the connection of the rechargeable batteries! Especially avoid accidentally short circuits while storing or transporting by e.g. a key ring or similar. Keep the rechargeable batteries in an isolating packaging outside of the handset.
- Never throw the rechargeable packing into water or into fire!
- Do not disassemble the rechargeable battery. There may be risk of injury!
- Do not use not other rechargers, the rechargeable batteries may be damaged.
- Do not use the handset in explosive environments.
- Medical devices may be influenced by an active mobile telephones (DECT). If mobile telephones are used inside medical buildings, the local restrictions have to be respected.
- If you wear a hearing aid, please pay attention to the fact that radio signals of sufficient intensity can interfere with the hearing aid when using the handset and may cause an unpleasant hum tone.
- Avoid placing the device into direct sunshine or other source of temperature. Protect the device against moisture, dirt, aggressive fluids or steam.

- Avoid placing the device into strong electromagnetic fields (electric motors, mobile phones, TV sets, VCRs, radios and household equipment).

## Technical Data

Operation voltage	Rechargeable battery pack 3,6 V (Ni-MH 600 mAh)
Charge time of the rechargeable batteries	app. 3,5 hours
Transmission protocol	DECT/GAP
Operation time	up to 120 hours stand-by, up to 12 hours when calling
Case material	ABS
Size	143 mm x 48 mm x 26 mm
Weight inclusive rechargeable batteries	121 g
Ambient temperature	0 to 40°C
Safety	CE

## Environmental Advice

The device contains a rechargeable battery. Please pay attention to the correct waste disposal of the no longer useful rechargeable batteries. Do not put the rechargeable batteries into the domestic waste, but to a recycling station for old batteries (see also [chapter Connect the rechargeable Battery on page 9](#)). This is also valid for the whole unit if it is not useful any longer one day. If you like that we do the waste disposal, please send back the unit to us (unfortunately unstamped deliveries cannot be accepted).

## Control the Capacity of the Rechargeable Batteries

To get a correct capacity status, the handset has to be at least one hour outside of the desktop charger. If there are less than three full bars, the battery has to be recharged.

Call the main menu.

Search for the menu „Battery“.

Open the menu.

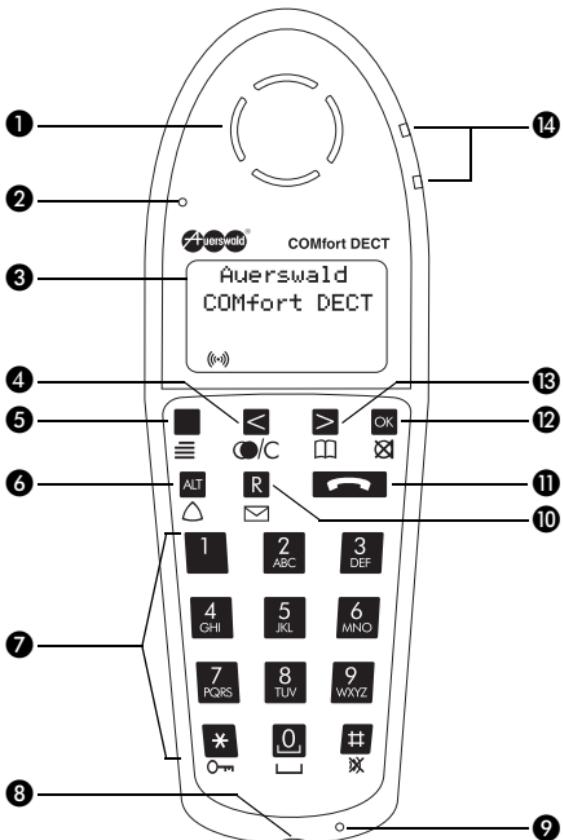

*The capacity of the battery is shown.*

Exit from this display.

## Description of the Keys

**pic. 7: Keys and Displays**

- ① Loudspeaker
- ② LED
- ③ Graphic display
- ④ Left arrow key (see [page 16](#))
- ⑤ Menu key (see [page 16](#))
- ⑥ Alt key (see [page 17](#))
- ⑦ Number keypad (see [page 17](#))
- ⑧ Headset connection
- ⑨ Microphone
- ⑩ R key (see [page 17](#))
- ⑪ Hook key (see [page 17](#))
- ⑫ OK key (see [page 16](#))
- ⑬ Right arrow key (see [page 16](#))
- ⑭ Volume keys (see [page 25](#))

## Menu Key

From the idle state this key switches to the main menu for different settings.

In case of opened/activated menu (settings, telephone book etc.) this key switches into the state of inactivity.

## Left Arrow Key

From the idle state this key switches into caller/redial list.

While entering a telephone number (dialing preparation/telephone book) a short activation of the key deletes the last digit. Holding the key (app. 3 seconds) deletes the whole telephone number.

When entering a name (telephone book) a short activation of the key moves the cursor to the left. Holding the key (app. 2 seconds) deletes the last sign in front of the cursor. Holding the key (app. 5 seconds) deletes the whole name.

If the menu is open (settings, telephone book etc.) this key browses to the left.

## Right Arrow Key

From the idle state this key switches into the telephone book.

When entering a name (telephone book) a short activation of the key moves the cursor to the right (if possible).

If the menu is open (settings, telephone book etc.), this key browses to the right.

## The OK Key

In the call state this key deactivates the microphone in the handset (mute). If you press this key again, the corresponding microphone will be activated again.

In case of an incoming call this key switches the ringer tone off.

If the menu is open (settings, telephone book etc.) this key confirms a selection.

In any arbitrary status a longer activation (4 seconds) of the key switches the handset off.

### Alt Key

This key enables a disconnect during switching functions.

### R Key (Query Key)

In a call this key enables the introduction of query calls, alternation or transfers.

### Hook Key

Before or after the dialing of a telephone number an activation of this key starts the call.

In the conversation or call status an activation of this key cancels the call.

If the device is switched off, a longer activation (app. 1 second) switches it on again.

### Keypad

When entering a telephone number (dial preparation/telephone book) and in off-hook state the number digits will be dialed.

When entering a name (telephone book) letters/characters are selected (see also [page 35](#)).

### Menu and Star Key

From the idle state these keys activate the key lock if pressed one after the other.

The same key combination also switches the key lock off.

### Menu and Hash Key

From the idle state these keys deactivates the ringer tone if pressed one after the other.

The same key combination also activates the ringer tone again.

### Menu and Number Key (1 or 2)

From the idle state these keys activate one of both profiles if they are pressed one after the other.

The menu key + 1 activates the profile 1. The menu key + 2 switches on the profile 2.

## Switching on/off the Device

If you do not need to use the handset from time to time, you are able to switch it off entirely (Rechargeable battery economy mode).

Press the OK key  for app. 4 seconds. The switching off will be confirmed by a short tone. Now you cannot be reached with the handset any longer.

Pressing the hook key  again (app. 1 second) will switch on the device again.

## Key lock

If you transport the handset in the pocket of your trousers or similar, it may be useful to protect the keys against accidental activation.

To activate the key lock, press the keys  and  one after the other.

While the key lock is active incoming calls can be accepted with the hook key . All the other keys are inactive.

To switch the key lock off again, press the keys  and  again.

## Switch off the Ringer Signal temporarily

If you like to be reachable without the disturbing ringing of the telephone, e.g during a conference you can switch off the ringer signal temporarily.

Press the keys  and  one after the other. Incoming calls will only be signalized via LED or via the activated vibration ringer.

To switch the ringer signal on again, press the keys  and .

## Accept a Call

If the telephone number was entered into the telephone book of your system telephone, the telephone number with the corresponding name will be shown on the display - as soon as the telephone has recognized the number. If you are called, the display shows the number or name of the caller even before you pick up the receiver. Preconditions for the indication of the telephone number of an external caller:

- The call origin was a digital network.
- The caller did not suppress the telephone number presentation.

If the number is not available, only „incoming call“ will be displayed.

*If you are not available or cannot accept the call for another reason, the caller's telephone number will be stored if available. Then you can directly dial the number from the caller's list to start a recall (see [page 22](#)).*

Mustermann,  
Thomas  
005318765432  
⟨⟩

*You get a call from Thomas Mustermann.*

Press the hook key.

## Make a call to Somebody

Auerswald  
COMfort DECT

Press the hook key.

Dial the requested telephone number (external numbers with exchange line access number).

005306920070  
0

*When you finish to dial the number, the subscriber will be called.*

*In case of an external telephone number do not forget to enter the exchange line access number „0“ (Exception: Direct exchange line telephone; see [page 28](#)).*

## Comfort Functions of the Telephone

With the functions described here such as caller list, telephone book etc. you are able to phone very comfortably.

## Dialing with Dial Preparation

The dial preparation enables you to check the entered number and to correct it if necessary before the connection starts.

Auerswald  
COMfort DECT

005306920070

0

Dial the requested number (external numbers with exchange line access number).

*As soon as you have dialed a digit, you can correct it with the left arrow key C.*

If the number is ok for you, press the hook key.

*Out of the dial preparation you can directly copy a telephone number into the telephone book by pressing the right arrow key C (see [page 31](#)).*

*If you like to leave the menu without dialing the telephone number already entered, you can delete the number by pressing (2 seconds) the left arrow key C.*

*In case of an external telephone number do not forget to enter the exchange line access number „0“ (Exception: Direct exchange line telephone; see [page 28](#)).*

## Dial a Telephone number out of the Caller and the Redial List

In the caller and redialing list of the telephone the numbers of unsuccessful calls are stored. You can directly call back a caller out of the caller list by pressing the hook key at the corresponding entry. A new call will be signaled by the blinking LED which is on the left side on top of the display. When scrolling the list the LED glows when the entry shows a caller that has not yet been recalled. Additionally your recently dialed numbers are stored.

Auerswald  
COMfort DECT

### REDIAL

22

### CLIP

00530692000

Open the caller list or redial list.

*The most recently dialed number is shown.*

Search for the requested entry.

*The telephone number of a caller (unsuccessful call) is displayed.*

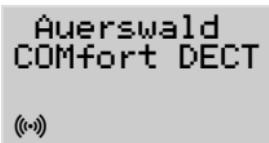

Press the hook key.

*If you like to leave the menu without dialing the displayed number, please press the menu key .*

## Dial a Telephone Number out of the Telephone Book

The telephone book is good for entering useful or often dialed telephone numbers together with the name. You can directly enter these telephone numbers with name in the telephone (see [page 30](#)) or you can transfer the short-code dial numbers of the PBX into the telephone with the help of the PC program *COMtools*. (The quantity of entries is dependent on the firmware version of the handset.) All entries are displayed in an alphabetical order. You can search for the entries by scrolling or by entering the initial ([page 38](#)) and directly dial the displayed telephone number out of the telephone book.

Open the telephone book.

Search for the requested entry.

or

Enter the initial (e.g. „K“ for „Kaiser“) (see also [page 38](#)).

Press the hook key.

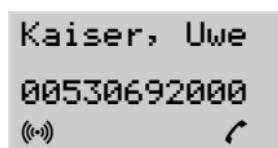

*The internal telephone numbers and short-code dial numbers of the PBX cannot be changed by the telephone.*

*If you like to leave the menu without dialing the telephone number, please press the menu key .*

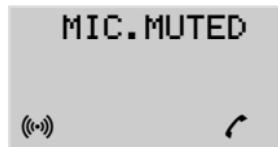

### Mute the Microphone

If you like to ask a question to somebody in the room and you do not like your calling partner on the phone to listen in to it, you can temporarily mute the microphone.

*You are in a call (the microphone is switched on).*

Switch off the microphone.

Switch on the microphone.

### Deactivate the Ringer temporarily

If your telephone rings, but you do not like to take the call at this moment, you can switch off the ringer of your telephone by pressing the OK key . The next call will be signalized again via ringing.

## Change the Volume during the Conversation

By pressing both volume keys (right on top of the display) you can influence the receiver volume in an active call (4 levels). The change is shown by bars on the display. After the call the volume falls back to the level configured under „profiles“ (see [page 41](#)).

## PBX Functions

With the system telephone *COMfort DECT* you can use most of the functions of the PBX such as pick up, call transfer, recall on busy and so on as described in the operation manual of the PBX.

Some functions such as alternation, transfer and so on are differently handled on ISDN telephones and also on system telephones than described for analog telephones in the operation manual of the PABX. How to set these functions with the system telephone *COMfort DECT* differently is described here.

The functions in the following list are not supported by the system telephone *COMfort DECT*:

- Reject a waiting caller
- Park the call on the internal S<sub>0</sub> port
- Call an internal third calling partner
- Establish a conference

## Accept a waiting Caller

During an ongoing call your attention is drawn to a new call (external subscriber, alarm or visitor on the door) by a knocking signal (tone in the receiver). To talk to the waiting caller or to confirm the alarm you will have two options.

1. First you finish the ongoing call and accept the new call at the same time by pressing the Alt key .
2. You start a new call by pressing the R key  (query call). Then the ongoing call partner will be put on Hold in the background.

*If you like to prevent the knocking signal on your telephone, you can deactivate the knocking (see operation manual of the PBX).*

## Initiate Query / Transfer

If you like to ask someone a question during a call or if you like to transfer your calling partner, you can initiate a query. The ongoing call is interrupted to call another subscriber. The 1st calling partner is put on hold in the background by the PBX during this time and is listening to the Music on Hold.

You start a query call by pressing the R key  (query key) followed by dialing the telephone number.

If you are in a query and like to connect the new calling partner with the partner on hold in the background, you can do this by pressing the hook key .

*Which telephone numbers you can dial in addition to the internal and external ones is described in the operation manual of the PBX.*

*In case of an external telephone number do not forget to enter the exchange line access number „0“.*

*If you like to connect an external calling partner with an internal subscriber, you can go on-hook as soon as you have dialed the internal telephone number. (Blind Transfer).*

### **The Subscriber called in a Query does not take the Call - Finish the Call**

If you like to call someone but he does not take the call, you would normally hang up the receiver. But if you do this out of an existing call while are calling another subscriber for a query, you would also disconnect the connection with the caller waiting in the background or start a Blind Transfer. You should press the Alt key instead if you like to finish the call.

### **The Subscriber called in a Query is busy - Finish the Call**

If you like to call someone but his connection is busy, you would normally hang up. But if you do this out of an existing call while are calling another subscriber for a query, you would also disconnect the connection with the caller waiting in the background. In this case the PBX will disconnect the system telephone *COMfort DECT* from the busy call after a few seconds. Then you will be connected with your first calling partner again.

## **Talk with both Calling Partners alternately (Alternation)**

If you started a query and liked to talk to both calling partners alternately, you could switch from one partner to the other by pressing the R key .

## **Finish a Query Call**

You finish a query call by pressing the R key  . You are now connected with the call partner you like to disconnect and finish this call by pressing the Alt key  .

## **Dial a Telephone Number on a Direct Exchange Line Telephone**

If your system telephone is configured as a Direct Exchange Line Telephone (with the configuration program of the PBX), you will hear the external dial tone right after picking up the receiver. To call an external connection, you have to dial the external telephone number **without the exchange line access number „0“**.

To make other types of calls (internal call, speed dialing, exchange line selection, private exchange line access, PABX programming), press the little star key   twice first each time.

The telephone book is good for the entries of useful or often dialled telephone numbers with name. You can enter these telephone numbers together with the name directly or you can transfer the short-code dial numbers of the PBX into the telephone with the help of the PC program COMtools. (The number of entries depends on the firmware version of the handset.)

All entries are displayed in an alphabetical order. You can search the entries by scrolling or by entering the initial ([page 38](#)) and directly dial the displayed telephone number out of the telephone book ([page 23](#)).

If a telephone number is available in the telephone book and was presented in case of an incoming call, in addition to the number, the corresponding name is shown on the display.

*Please enter the telephone number the same way you did when dialing e.g. external telephone numbers that means always with a preceding „0“. (Exception: Direct exchange line telephone; see [page 28](#).)*

*Manually entered numbers cannot be overwritten or edited with COMtools.*

## Store a new Entry

Auerswald  
COMfort DECT

0053192000

STORE NO.?  
00530692000

NAME:

Auerswald■

Enter the telephone number.

Open the telephone book.

Confirm the number.

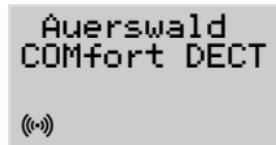

Enter a name (see also [page 35](#)).

Confirm the entry.

## Take over a Telephone Number from the Caller/Redial List

Open the caller/redial list.

(You will find the menu „redial“ also via the main menu.)

Search for the requested entry.

Confirm the entry.

Scroll to the next function.

Confirm the number.

*Now the telephone number is available in the telephone book and can be edited as described in the next chapter.*

NAME:

Enter a name (see also [page 35](#)) and confirm the entry.

## Edit an existing Entry

Auerswald  
COMfort DECT

Open the telephone book.

(You will find the menu „telephone book“ also via the main menu.)

0053064444

*The first entry of the telephone book is displayed  
(Telephone numbers without a name are shown first.)*

Confirm.

DELETE?  
0053064444

Enter the name or change it (see also [page 35](#)) and confirm the entry.

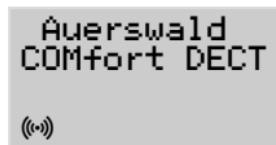

*The telephone numbers in the short-code dial memory of the PBX can only be edited with the PC program COMtools.*

*You can delete digits in a telephone number with the left arrow key . A short key pressing deletes the last digit. If the key is held for app. 3 seconds the whole number is deleted.*

*You can delete letters and digits in a name with the left arrow key . Holding the key (app. 2 seconds) deletes the last sign in front of the cursor. Holding the key (app. 5 seconds) deletes the whole name. You can move the cursor to the left and to the right within a name by pressing the arrow keys and .*

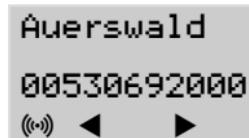

## Delete an Entry

If you do not like to store all entries (e.g. to have an easy overview), you can delete certain entries.

Open the telephone book.

(You will find the menu „telephone book“ also via the main menu.)

*The first entry of the telephone book is displayed.*

Search requested entry.

or

Enter the initial (e.g. „K“ for „Kaiser“) (see also [page 35](#)).

Confirm with ok.

Confirm with ok.

*The telephone numbers in the short-code dial memory of the PBX can only be edited with the PC program COMtools.*

## Input of Letters with the Keypad

With the keypad you can enter digits as well as letters or various special signs (see table on [page 36](#)).

For text entry the system telephone automatically switches from the entry of digits to the entry of letters. This will happen if you edit an entry for the telephone book. When pressing the number keys once or repeatedly, they become letters, digits or various other signs. For example, if you press the key  three times, you will reach the third letter on the key – the „L“.

If you press the hash key  you can change from minuscule to capital letters and vice versa (see example on [page 37](#)).

Besides this you can search for entries in the telephone book by entering the initial or the complete name. If you press the right arrow key  and then a number key once or repeatedly, the system telephone will recognize a letter and jump to the next entry with the corresponding initial (see example on [page 38](#)).

	Capital letters	Small letters
1	Æ Ø Å @ Ä Ö ß Ü 1	æ ø å @ ä ö ß ü 1
2 ABC	A B C @ Ä Á À Â 2	a b c @ ä á à â 2
3 DEF	D E F 3	d e f 3
4 GHI	G H I Í Î 4	g h i Í Î 4
5 JKL	J K L 5	j k l 5
6 MNO	M N O Ö Ó Ò 6	m n o ö ó ò 6
7 PQRS	P Q R S ß 7	p q r s ß 7
8 TUV	T U V Ü Ú Ù Ú 8	t u v ü ú ù ú 8
9 WXYZ	W X Y Z 9	w x y z 9
0 —	Space . , _ - + : ? ! 0	
*	* # / \ ( ) = &	
#	Switching from capital to small letters	

## Example for the Entry of a Name into the Telephone Book

Enter initial (e.g. „K“ for „Kai“).

Switch to „small letters“.

Enter the second letter „a“.

Enter the third letter „i“.

Confirm the entry with ok.

You can delete letters and numbers in a name with the left arrow key . Pressing the key (app. 2 seconds) deletes the last sign in front of the cursor. Holding the key (app. 5 seconds) deletes the whole name. While shortly pressing the arrow keys and you can shift the cursor within a name to the left and the right.

## Example for searching a Name in the Telephone Book
